

ABSTRACT

A lateral-view mirror assembly for a vehicle capable of providing a driver of a vehicle with the ability to view objects positioned lateral to a rear portion of the vehicle by looking at a reflection of the objects reflected from the lateral-view mirror to the driver. One embodiment requires the use of a rear-view mirror, while another requires the use of a side-view mirror. The lateral-view mirror can be coupled to the vehicle during the manufacturing stage or after manufacture with an adhesive.
